Initial Draft of Milestone 2	**03/13/2017**	**V2.0**
First Revision & Freeze Draft of Milestone 2	**03/20/2017**	**V2.1**

1) Executive Summary

"SFSU Congre-Gators Market" is a buy/sell web application exclusively for SFSU students that is beneficial, convenient, and of great value to the SFSU community. Users can create item listings on the website to sell various types of items including books, electronics, furniture, and more that are of interest to students. The application consists of two general types of users: non-registered and registered. Both of these users can browse the website for compelling items, and the latter can purchase items posted by other registered users or sell items of their own. Registered users Shall be able to contact each other through messaging provided by our web application while transactions take place outside of the application after an agreement. Moreover, the website shall have at least one admin whose job shall be to monitor postings and messages to ensure a safe and legitimate environment.

The SFSU Congre-Gator's Market offers students our unique Convenient Meetup feature. This allows students to input their busy schedules as part of their profile. Congre-Gator's Market will compare schedules when contact is initiated between buyers and sellers, and provide appointment options. This alleviates buyers and sellers at Congre-Gator's Market the of hassle of coordinating often hectic schedules. Between courses that meet at different times on different days of the week, midterms and work, this unique feature will be of substantial value to the student who often struggles to coordinate that one last appointment! Furthermore, there is no hassle waiting on a shipment since all members are also students. Hence, they are local to the area and can meet on campus. There is also the implicit security that comes with each buyer or seller being a verified SFSU student, and having a common meeting ground at the SFSU campus or nearby. All members being students also means registered users are not unfamiliar to the faculty and staff which makes it difficult for engagement in misconduct as no student should want to sully their reputation amongst their peers and instructors. Finally, students can find products relevant to their needs by finding items posted from other students who took similar courses.

We are Team 4 of CSC 648-848 Section 1 - Software Engineering at SFSU, Spring 2017. Our mission is to experience the real world and what it means to build a startup company by developing a fully functional buy/sell web application that is also promotable as a legitimate product. Not only do we desire to create a great application, but we do so as a team that appreciates the open-mindedness of its members and uses real world techniques like Agile and Continuous Software Development.

2) Use Cases

Non-registered User: Jane is in the market for a new laptop after her old laptop, which she owned for several years, recently crashed mid-semester. As a student, a new laptop costs more than Jane can afford, so she is looking for a used laptop. Jane has heard about the student web-service that links students who want to sell items, including electronics. She visits the website and navigates to the electronic section and, with the use of filters, quickly finds an **item listing** with the item she is looking for at an affordable price. Jane decides to contact the seller, but since she is a **non-registered user,** she is only allowed to browse and cannot purchase (or post) items for sale. Jane is therefore prompted to register and verify her status as an SFSU student. She happily complied with the registration request and became a **registered user**. Her status as a registered user allows her to view the seller's contact information. Jane then contacted the seller and agreed to purchase the laptop.

Registered User (Buyer/Seller): Joe is a senior student at SFSU who lives on campus. He is planning on graduating this semester and wants to sell his dorm room furniture. However, Joe is still quite busy finishing his school work. Therefore, he needs an ideal way to offload his furniture to a fellow student while also allowing Joe to coordinate payments and move his items efficiently. Joe is already a **registered user** (since he bought his dorm furniture through the website when he was an incoming freshman) and thus has the freedom to log onto the website and post his furniture for sale. Joe creates a new **item listing** on the website for each of the furniture items he wishes to sell. He then waits for another **registered user**, who is interested in his items, to contact him to arrange a purchase. Fortunately, Joe finds a customer interested in his item listing. They agree to meet up on campus where both parties can make a quick and safe transaction.

Administrator: Jack, the IT guy, has been receiving complaints from several sellers about misconduct from a particular **registered user.** Apparently, the user has been sending **messages** which bluff interest in an item but result in non-payment or perpetual negotiations between the two parties. This user has accrued enough complaints from other registered users that Jack the IT guy confirms the issue by investigating the history of messages. Jack flags the offending user and warns him/her that further misconduct will result in a ban from the web service.

Convenient Meetup: Jill is a freshman and new to SFSU, so is she not that familiar with the area. But she is familiar with SFSU Congre-gator's market and would like to buy some new furniture! As a **registered user** at Congre-Gators Market, she decides to use the site's **Convenient Meetup** feature which lists locations to meet up on campus for convenience.

3) Data Definitions

1. **Non-registered User (nonreg_user):**
   1.1. Can browse on the website
   1.2. Can filter items on the website
   1.3. Can register on the website
   1.4. Can use features 1.1, 1.2, 1.3 without registration/login

2. **Registered User (reg_user):**
   2.1. Can do anything a non-registered user can do
   2.2. Can login on the website
   2.3. Can purchase items for sale
      2.3.1. Can contact seller
   2.4. Can post items for sale
      2.4.1. Can edit item listing
         2.4.1.1. Can edit name, category, price, date, photo(s) and description
         2.4.1.2. Can remove posting
         2.4.1.3. Can view posting
   2.5. Can contact other registered users
   2.6. Can use Meetup for convenience
   2.7. Can view notifications
   2.8. Can edit profile
      2.8.1. Can edit username, password, major, photo and biography
   2.9. Can report misconduct to admin

3. **Administrator (admin):**
   3.1. Can do anything a registered user can do
   3.2. Needs to login/register
   3.3. Can monitor messages
   3.4. Can remove items posted for sale
   3.5. Can contact registered users
   3.6. Can ban registered users

4. **Item Listing (item_listing):**
   4.1. Item Name
   4.2. Price
   4.3. Description
   4.4. Date
   4.5. Seller

4.6.   Photos

5.   Message (message):
    5.1.   Thread
    5.2.   To (Recipient)
    5.3.   From (Sender)
    5.4.   Date/Time
    5.5.   Organized under Notifications page
    5.6.   Reference to Item Listing

6.   Convenient Meetup (meetup)
    6.1.   Location to meet up from a list of options available on the map
    6.2.   A date and time both members can agree upon in the message thread and a confirm button for admin in case of any misconduct

4) List of Functional Specs

Priority 1
1. **Non-registered**
    1.1. Shall be able to browse the website for available items for sale.
        1.1.1. Listings shall be paginated.
        1.1.2. Shall be able to view carousel of photo's uploaded by seller.
    1.2. Shall be able to filter the items via drop down menus:
        1.2.1. By 'Category.'
        1.2.2. By 'Price.'
        1.2.3. By 'Date of item's listing.'
    1.3. Shall be able to register on the website to buy or sell items via registration form.
        1.3.1. The registration form shall require a unique username, a password, and an SFSU email.
2. **Registered user**
    2.1. Shall be able to do everything a non-registered user can do.
    2.2. Shall be able to login to the website.
    2.3. Shall be able to buy an item for sale.
    2.4. Shall be able to post an item for sale.
    2.5. Should be able to choose a place to meet up from a map.
        2.5.1. Shall be able to update his/her item for sale.
        2.5.2. Shall be able to remove his/her item for sale.
    2.6. Shall be able to view the items that were posted by him/her for sale.
    2.7. Shall be able to message another registered user to initiate a transaction.
        2.7.1. Messages shall be updated "live" in a thread with the latest message at the bottom.
3. **Administrator**
    3.1. Shall be able to remove an item listing.
    3.2. Shall be able to warn registered users of misconduct.
        3.2.1. The admin Shall be able to to penalize said users by banning them from the website ultimately.
    3.3. Shall be able to remove photos.

Priority 2
1. **Registered user**
    1.1. Shall be able to view their notifications on Notifications page.
        1.1.1. Accessed via toolbar after registered user logs in the website.
        1.1.2. Organized according to buyer-seller.

        1.1.2.1.   Shall be able to have several transactions lumped into a single conversation.

  1.2.   Shall be able to edit their profile.

      1.2.1.   Shall be able to change their password.

  1.3.   Shall be able to accrue item listings a shopping cart page.

      1.3.1.   Lists seller and price.

      1.3.2.   Gives the option to message seller with the Meetup button.

      1.3.3.   Shall be able to remove an item.

  1.4.   Shall be able to lookup search history.

  1.5.   Messages between buyers and sellers Shall be able to be conducted in a popup window.

      1.5.1.   Accessed via notifications page or when a user clicks on 'Buy' option for an item listing.

Priority 3

1.   Registered user

  1.1.   Shall be alerted to unread notifications.

      1.1.1.   A sum representing the number of unread notifications will appear in the toolbar next to the Notifications link.

  1.2.   Registered users shall be able to switch the color of their UI.

  1.3.   Shall be able to organize item postings in wishlist to be added later to shopping cart.

  1.4.   Shall be able to use Convenient Meetup.

      1.4.1.   Chooses a location from a map containing a list of location options.

  1.5.   Shall be able to block messages from unwanted (registered) users.

  1.6.   Shall have a related item category when selecting items.

5) List of Non-Functional Specs

1. The application shall be developed using the LAMP stack provided by the class CTO.
2. The application shall be developed using an approved PHP Framework from the class CTO.
3. The application shall be developed using GUI technologies.
4. The application shall be hosted and deployed on Amazon Web Services provided by the Class CTO.
5. The application shall be optimized for standard desktop/laptop browsers.
6. The application shall render correctly on the two latest versions of at least three major browsers such as Mozilla, Safari, and Chrome.
7. The application shall have responsive UI code so it can be adequately rendered on mobile devices, but no mobile native app is to be deployed.
8. Data shall be stored in the MySQL database on the class server in the team's account.
9. The application shall be served from the team's account.
10. Privacy of users shall be protected, and all privacy policies will be appropriately communicated to the users.
11. No more than 50 concurrent users shall be accessing the application at any time.
12. The language used shall be English.
13. The application shall be very easy to use and intuitive. No prior training shall be required to use the website.
14. Google Analytics shall be added.
15. Messaging between users shall be done only by class approved methods to avoid issues of security with e-mail services.
16. Pay functionality shall not be implemented on the website.
17. Site security shall be applied according to best practices.
18. Modern SE processes and practices shall be used including collaborative and continuous SW development.
19. The website shall prominently display the following text on all pages "SFSU Software Engineering Project, Spring 2017. For Demonstration Only."
20. The team shall use Github to maintain the website codebase.

7) Competitive Analysis

Registered users can post multiple images for each product to enhance the advertising quality of their product. Messaging is also available directly through the website for faster communication. The website admins can monitor these messages for any misconduct to promote a safe environment for users.

Competitive Analysis Graph of Features

	Our Application	sellstudentstuff	Craigslist	student2student
Search	+	+	++	+
Filters	+	+	+	-
Uploading Photos	+	+	+	+
Delivery Cost And Time	++	-	-	-
Variation in Items offered	+	-	+	-
No Service charge	+	+	-	+
Messaging	+	-	-	-
Convenient Meetup	++	-	-	-

Legend: Feature exists **+**, Superior feature **++**, Feature does not exist **-**

When students purchase products online, a common issue is the delivery time to receive their desired product. For example, books are typically expensive to buy and slow to deliver. Paying for quick delivery adds even more onto the total cost. Unlike our competitors, with SFSU Congre-Gator's Market, students can meet on campus as quickly as the same day or whenever their schedules permit! Meeting in-person allows buyers to inspect the product before paying, and there are no delivery costs for either party. Also, the Convenient Meetup feature takes the hassle of coordinating schedules out of the hands of the student by comparing user input schedules between buyers and sellers. It's one more way to make life easier for the student at Congre-Gator's Market!

8) High Level Architecture

1. **01-LAMP Stack:** (SF-SUSE Server Information)
   1.1. Host: Amazon Cloud
   1.2. OS: Ubuntu Server, Version: 16.04
   1.3. MySQL Version: 5.7
   1.4. PHP Version: 7.0.13
   1.5. OpenSSH Version: 7.2
   1.6. Git Version: 2.7.4
   1.7. Python: 2.7
   1.8. Ruby: 2.3.1
   1.9. nodejs: 4.2.6
   1.10. npm: 3.5.2
   1.11. Less: 481
   1.12. Sass: 3.4.23

2. **PHP Framework:**
   2.1. CodeIgniter: Version 3.1.3

3. **GUI Technologies:**
   3.1. Javascript: Version 1.8
   3.2. jQuery: Version 3.1.1
   3.3. Bootstrap: Version 4.0.0-alpha.6
   3.4. CSS 3
   3.5. Font Awesome (Glyphicons) Version 4.7.0

4. **Major Browsers:**
   4.1. Mozilla Firefox: Version 51.0, 51.0.1 (64-bit)
   4.2. Safari: Version 9.1.3, 9.0.2,
   4.3. Google Chrome: Version 56.0.2924.87 (64-bit)

5. **Team's account where website will be served:**
   5.1. http://www.sfsuse.com/~sp17g04

6. **Team's application of choice where website contributions will be made:**
   6.1. Github

9.1) Search Strategy

Non-registered/registered users shall be able to search through item listings in the search bar. When the search query is sent to the system, it will go through the **item_listing** table and do **LIKE** %query% on the title field based on the **category** selected in the drop-down next to the search bar. If no result comes up, then it will perform a LIKE %query% on the description field of **item listings** in that **category**. Results will be posted if available, otherwise a message will be shown to the user and all available item listings will be displayed. If the **category** selected is 'All', then the search omits the **category** from the search criteria.

9.2) Files or BLOBs

We have chosen BLOBs as the means to store images of items. They are more convenient and make code much more readable. Also, BLOBs are more secure as compared to File system accesses because DB systems already have a level of authentication in them.

10) UML Diagrams (Class and Deployment)

11) Key Risks

Varying Levels of Competency

On the tools we are using, some of the team members will have had more experience than others, most notably with our PHP framework and Github. The team will mitigate discrepancies with honest evaluations of skill levels and delegation of the workload. While we must meet deadlines, we must also avoid heaping too much work on a few individuals as well as denying others opportunities to learn.

Legal

The software team will mitigate legal issues with due diligence. Lawyers are expensive, and the scope of our project is relatively small. If we've correctly identified key risks, this seems possible. When in doubt, we can hire a lawyer. Additionally, we shall implement a strictly worded terms-of-service agreement. What follows is a list of specific legal key risks:

- **Intellectual Property**
  - Software features shall not infringe upon intellectual property. The imminent danger is with Convenient Meetup.
- **Advertising: False Claims and Third Party Terms of Service**
  - We need to be sure we don't make false claims. For example, Convenient Meetup compares user schedules. We don't provide a venue for users to meet. Furthermore, we need to be sure that we do not infringe upon the terms and conditions of any third party sites we might like to use for advertising such as Facebook and other popular social media platforms.
- **Defamation**
  - We claim to offer superior services than competitors in some respects. If a third party promotes these claims, they should be made carefully so as not to be construed as defamation.
- **Privacy**
  - Users will register with private information. We need to be sure we are in compliance with privacy protection laws.
- **Copyrighted Images: Us and Our Users**
  - Copyrighted images could get us in trouble. For example, the SFSU logo is copyrighted. While the software team should find it relatively easy to avoid the use of copyrighted images in our UI, a right of users is that they have the freedom to upload their pictures. The terms of service should outline we accept no responsibility for images uploaded by our users.

12) Team

Ihsan Taha:
1. CEO of the team.
2. Designing UI (Bootstrap) for the project.
3. Github curator.
4. Back-end developer.

Prateek Gupta:
1. CTO of the team.
2. Database design and development.
3. Back-end developer.

Darel Ogbonna:
1. Documentation.
2. Database management and maintenance.
3. Back-end Developer.

Shane Cota:
1. Documentation.
2. Back-end Developer.

Kevin Chu:
1. Front-end developer.
2. Back-end developer.

Mark Tompong:
1. Front-end developer.
2. Back-end developer.

13) Checklist

- Team decided on basic means of communications: DONE

- Team found a time slot to meet outside of the class: DONE

- CTO chosen and working out well so far: DONE

- Github master chosen: DONE

- Team ready and able to use the chosen framework: DONE

- Skills of each team member defined and known to all: DONE

- Team lead ensured that all team members read the final M2 and agree/understand it before submission: DONE
